## INTRODUCTION

X77-10211

This document, intended to replace JSC 02681, JSC 08962, JSC 07572, and JSC 10625, provides ratings and test data for those materials tested by NASA for flammability, offgassing, thermal vacuum stability, Oxygen compatibility, and hazardous fluids compatibility for conformance to the requirements stated in NHB 8060.1B and SP-R-0022A. The data provided in this document has been divided into two sections for ease of use. Section I contains four material rating indices sorted four different ways (Manufacturer Index, Material Description Index, Generic I.D. Index, and Material Code Index) and three special indices of material test data and ratings (Flammability Index, Outgassing (VCM) Index, and Fluid Compatibility Index). Section II (published on microfiche) contains the actual test data recorded from each test report.

### Material Rating Criteria and Codes

Flammability - Materials tested per NHB 8060.1B Test 1 (Upwards Flammability and Test 2 (Downwards Flammability) are rated for each test environment as follows:

- "A" - Meets NHB 8060.1B Test 1 requirements by burning less than 6 inches in the thickness and test conditions specified. Material is acceptable for unlimited use.
- "B" - Fails NHB 8060.1B Test 1 in the thickness and test conditions specified by burning at least 6 inches; but self-extinguishing before 12 inches were burned and did not burn more than 1 inch in Test 2. Material is acceptable with controls.
- "C" - Fails NHB 8060.1B Test 1 in the thickness and test conditions specified with a burn length of at least 12 inches and a burn rate of less than 0.1 inches/second down in Test 2. Material is marginal.
- "X" - Material is unacceptable and requires a waiver or MUA for usage.
- "S" - Special configuration test. See actual test report.
- "I" - Insufficient data to rate the material.
- "\*" - Tested in an atmosphere other than air or 30% oxygen. See the Flammability Index.

Offgassing - Unless otherwise noted, all data was normalized to a reference of 10 pounds quantity, 168 hour duration and a 65 cubic meter volume and then compared with MAC values listed in NHB 8060.1B or with those values approved by the JSC toxicologist. Ratings are assigned as follows:

- "K" - Meets MAC values for 100 pounds usage without special cure.
- "A" - Meets MAC values for 10 pounds usage without special cure.
- "B" - Meets MAC values for 100 or 10 pound usage with special cure.
- "V" - Meets MAC values for 5 pound usage without special cure. MUA required for usage.
- "X" - Data greater than MAC values for 5 pound usage. MUA required. ("K" or "A" rated materials are acceptable for usage without an MUA. Cures must be specified in the materials list for "B" rated materials.)

Thermal Vacuum Stability - Materials tested per JSC SP-R-0022A are rated as follows:

"A" - Meets the requirements of JSC SP-R-0022A [VCM < 0.1% and TML (weight loss) - RML (moisture loss) < 1.0%] without special cure.

"B" - Meets the requirements of JSC SP-R-0022A with a special cure and/or bakeout.

"C" - Does not meet the requirements of JSC SP-R-0022A; but the TML-RML was less than 3.0% and VCM was less than 1.0%. This material will be acceptable by MUA if its exposed area is 13 square centimeters or less and the material is out of the line-of-sight of payload surfaces and other contamination critical surfaces.

"X" - Does not meet the requirements of JSC SP-R-0022A but the TML-RML was greater than 3.0% and VCM was greater than 1.0%. (MUA's must be submitted for all materials that are not "A" rated. Cure for "B" rated materials must be specified in the materials list.)

"Q" - Indicates a TQCM configuration test.

#### Hazardous Fluids Compatibility

Nitrogen Tetroxide - Materials are acceptable for use in Nitrogen tetroxide ( $N_2O_2$ ) if they pass the fluid compatibility test of NHB 8060.1B Test 15. Materials are considered compatible if exposure to fluid for 48 hours at 160°F does not result in chemical changes such as thickness, flaking, dissolution, etc.

Hydraulic Fluids - Materials are acceptable for use in hydraulic fluids if the fluid and material do not deteriorate appreciably on long-term contact over the range of 65°F to 272°F, when tested per NHB 8060.1B Test 15 and does not cause corrosion of metallic material.

Hydrazine - Materials are acceptable for use in hydrazine or monomethyl hydrazine if they pass the fluid compatibility test of NHB 8060.1B Test 15.

#### LOX/GOX Compatibility

Mechanical Impact - Ratings are as follows:

"A" - Material meets the mechanical impact requirements of NHB 8060.1B Test 13 at the indicated thickness, pressure, and temperature with no reactions in 20 impacts or one reaction in 60 impacts, at 368 ft-lbs/in<sup>2</sup>, 72 ft-lbs, or 10 kgm and does not require batch testing.

"B" - Material meets the mechanical impact requirements of NHB 8060.1B Test 13 at the indicated thickness, pressure, and temperature; but requires batch testing.

"C" - Material fails Test 13 at 368 ft-lbs/in<sup>2</sup>; but passes at some energy level above 102 ft-lbs/in<sup>2</sup> at the test pressure and temperature and must be evaluated in its use conditions and must be batch tested.

"X" - Material fails Test 13 at 102 ft-lbs/in<sup>2</sup>.

(MUA's are required for all materials not rated "A".)

Pneumatic Impact - Material is acceptable if no reactions occur in 20 surges at the test pressure and temperature indicated.

## Guide to Section I

This section contains flammability, offgassing, and thermal vacuum stability ratings for those materials tested by NASA. For ease of access the data has been sorted in four different ways: by material manufacturer, material description/designation, material type/generic I.D., and material code/index number. The data contained in each of these indices are as follows:

Material Description - Name, abbreviated name, or manufacturer designation of the material, configuration, component, assembly, subassembly, etc., that was tested.

Lot Number - Last six digits of the lot/batch number (if known) of the item tested.

Manufacturer - Name or abbreviated name of the manufacturer of the item tested.

Material Code/Index Number - Material code number (if applicable) of the item tested. Numbers obtained from the latest version of JSC 09604/MSFC-STD-527.

Decode of the generic I.D. - The decode (description) of the first two characters of the generic identification code (the six alpha characters identifying functional or design usage data and generic/chemical composition data. See Appendix II for a list of the codes.) The first two characters identify material types such as adhesives, tapes, composition, rubbers, etc.

Flamm AIR/30% - The flammability ratings for those items tested in air (21% oxygen at 14.7 psia) and in shuttle atmosphere (30% oxygen at 10.2 psia). The asterisk in the center column indicates that the material was tested in some other atmosphere and the ratings can be found under that atmosphere in the Flammability Index.

Tox Rating - The offgassing ratings for those items tested for conformance to NHB 8060.1B Test 7 or 16.

VCM Rating - The thermal vacuum stability ratings for those items tested for conformance to JSC SP-R-0022A. A "Q" in this column indicates that a TQCM configuration test was performed instead of the standard outgassing test.

Access Number - An internal file reference number that has no significance except to assist in the retrieval of test reports.

Test Report Number - The number assigned to the test request by the facility performing the test.

This section also contains three special indices, the Flammability Index, the Outgassing (VCM) Index, and the Fluids Index. Each index is sorted by material description and contains the material description, lot number, manufacturer, index number, generic decode, and test report number. The Flammability Index contains the flammability ratings for all the atmospheres in which an item may have been tested. The Outgassing Index contains the VCM, TML, RML, and curing data that was used to determine the material rating. The last index in this section, the Fluids Index, contains the test data for material compatibility with LOX, GOX, and hazardous fluids such as hydrazine and Nitrogen tetroxide as follows:

## Guide to Section I (Continued)

Sample Thickness - The thickness in inches of the material tested.  
Test Type - The code for the test performed. See Appendix III for an explanation of the codes.  
Atmos - The atmosphere or fluid in which the test was performed.  
Pres. - The pressure in psia at which the test was performed.  
Temp. - The temperature in degrees Fahrenheit at which the test was performed. The letters AMB indicate "ambient" or room temperature.  
Imp Eng - The impact energy density in foot pounds per square inch specified for the mechanical impact test (Test 13).  
Reactions - This column indicates the number of reactions per the total number of specimens tested. SE/RP (see report) - Please reference the actual test report.

## Guide to Section II

This section contains the raw data (sorted by test report number) as recorded from the test report. It is published on microfiche to facilitate its use. The data recorded, as applicable, with each test report is as follows:

### Header Information

Tr Nbr - Test Report Number  
Acc Nbr - Access Number  
Material Description  
Manufacturer  
Lot Num - Lot Number  
Gen I. D. - Generic Identification Code  
Generic Description  
Index Num - Material Code/Index Number  
Data Source - The abbreviation for the test facility

### Flammability

Press - The pressure in psia of the test chamber.  
Atmos - The atmosphere in % Oxygen/% Nitrogen of the test chamber. For example, 21/79 is 21% Oxygen and 79% Nitrogen.  
Thick - The thickness in inches of the sample tested.  
1st Gas - The Oxygen partial pressure of the test atmosphere. 02 indicates Oxygen, and the last three numbers indicate the partial pressure in tenths of percentage points (02031 means 31 tenths of 3.1% Oxygen partial pressure).  
2nd Gas - The Nitrogen partial pressure of the test atmosphere.  
Cure Time - The time, if applicable, at which the tested material was cured.  
Cure Temp - The temperature, if applicable, at which the tested material was cured.  
Cure Press - The pressure, if applicable, at which the tested material was cured.

Guide to Section II (Continued)

Upward (Downward) Burn Rate - The maximum rate at which the material burned in NHB 8060.1B Test 1 (Test 2).

Upward (Downward) Burn Length - The maximum length at which the material burned in NHB 8060.1B Test 1 (Test 2).

Upward (Downward) tt - The Test Type code. See Appendix III for explanation.

Upward (Downward) ri - The Result Indicator code. See Appendix III for explanation.

Flam Rating - The flammability rating as determined by the preceding data.

Flash & Fire

Press

Atmos

1st Gas

2nd Gas

Flash Point - The temperature in degrees Fahrenheit at which the material flashed. (Nxx indicates that the material did not flash at temperatures below ten times xx. Example: N99 = no flash point below 990°F.)

Fire Point - The temperature in degrees Fahrenheit at which the material sustained fire.

Test Type

Result Indict - Result Indicator

Oxygen Index - The lowest percentage of Oxygen that will support combustion in the ASTM D2863 test for the critical Oxygen Index.

Odor

Press

Atmos

Temp - The temperature at which the test was performed.

Thick

1st Gas

2nd Gas

Cure Time

Cure Temp

Cure Press

Odor value - An odor rating in accordance with NHB 8060.1B Test 6.

Test Type

Result Indict

Guide to Section II (Continued)

Outgassing

Cure Time

Cure Temp

Cure Press

Mass Loss (TML) - The percentage of the total mass loss (TML) measured in the thermal vacuum stability (TVS) test in JSC SP-R-0022A.

Moisture Loss (RML) - The percentage of the recoverable mass loss (RML) or water vapor recovery (WVR) measured in the TVS test.

Condensable Matl (VCM) - The percentage of the volatile condensable materials (VCM) measured in the TVS test.

Outgassing Rating - The TVS rating as determined by the preceding data.

Offgassing

Press

Atmos

Temp

1st Gas

2nd Gas

Cure Time

Cure Temp

Test Type

Tox Rating - The toxicity rating as determined by the trace gases and the corresponding amount found.

Trace Gases Identified - The chemical components offgassed and identified in NHB 8060.1B Test 7 or 16.

Amount Found - The quantity in micrograms/gram offgassed by each chemical component.

Smac Limit - The Shuttle Maximum Allowable Concentration (SMAC) limit (adjusted to micrograms/grams for 100 pounds usage) as determined by NHB 8060.1B or the JSC toxicologist.

Fluid Compat

Press

Atmos

Temp

Thick

Cure Time

Cure Temp

Cure Press

Impact Energy - The impact energy density in foot pounds per square inch specified for the mechanical impact test (Test 13).

Reactions - The number of reactions per the total number of specimens tested. SE/RP (see report) - Please reference the actual test report.

Autoig Temp - The autoignition temperature.

Test Type

Result Indict

Guide to Section II (Continued)

TQCM (Thermally Controlled Quartz Crystal Monitor)

Sample Temp - The temperature in degrees Celsius of the material or component during the test.

Collector Temp - The temperature in degrees Celsius of the quartz crystal during the test.

Press - The pressure in  $10^{-5}$  torr of the test chamber during the test period.

Duration - The time in hours the material or component was in test at the test pressure.

Pretest Weight - The weight in grams of the material or component prior to subjecting it to the test conditions.

Posttest Weight - The weight in grams of the material of component at the completion of the test.

Vapor Recovery Weight - The percentage difference between the pretest and posttest weights.

Condensation Rates - The maximum, the minimum, and the 24 hour rates of collection in milligram/square centimeter/second on the TQCM during the test. The value given is in scientific notation, but is missing the negative sign for the exponent. For example, 5.0E11 is actually  $5.0 \times 10^{-11}$ .

ABSORB- absorber  
 ACC- accessories  
 ACCESS- accessories  
 ACBS- accessories  
 ACR- acrylic  
 ACRY- acrylic  
 ACRYL- acrylic  
 ACRYLI- acrylic

WHT- white  
WKS- weeks  
WRN- worn  
WSH- wash  
XDUCER- transducer  
YEL- yellow

APPENDIX II - Generic I. D. Tables

## INTRODUCTION

To assist in identifying the many materials that are tested to various specifications in order to qualify them for use on manned space programs, NASA/JSC/ES5 devised a six alpha character code.

The six characters are further subdivided into three two character subsets. The first subset (see Table 1) refers to the functional or design use of the material. The second set (see Table 2) refers to the major chemical composition and the third (see Table 2) to additional information, if available on the chemical composition. For metals, the second set would refer to the primary metal composition and the third set to the major alloying metal.

The following examples are presented for clarification purposes.

### Example 1. CHCKCQ

The three codes are CH, CK and CQ

from Table 1.

CH = Gasketing seal

from Table 2.

CK = silicone

CQ = urethane

### Example 2. DTMTMA

The three codes are DT, MT and MA

from Table 1.

DT = sheet

from Table 2.

MT = titanium

MA = aluminum

TABLE I. NASA MATERIAL CODES (FIRST PAIR OF CHARACTERS)

CODE	DEFINITION
AA	ABSORBER,N.O.C.

FI	DISK, N.O.C.
FJ	INSULATION, N.O.C.
FK	SOLDERING MATL, N.O.C.
FL	BRAZING MATL, N.O.C.
FM	WELDING, N.O.C.
PS	PROCESS SPECS. USED ON DETAIL DWGS.
XX	N.O.C.

NOTE: N.O.C. - NOT OTHERWISE CLASSIFIED

TABLE II NASA MATERIAL CODES (SECOND 2 PAIRS OF CHARACTERS)

CODE	DEFINITION
AA	ACRYLIC LATEX
AB	EPOXY ESTER
AC	LATEX,N.O.C.
AD	MODIFIED (FOR USE AS LAST PAIR OF CHARACTERS ONLY)
AE	POLYVINYL CHLORIDE, PLASTISOL OR ORGANOSOL
AF	SHELLAC
AG	URETHANE,MOISTURE CURED
AH	ZINC CHROMATE PIGMENTED
AI	ACRYLONITRILE-BUTADIENE-STYRENE (ABS)
AJ	ACETAL,E.G., COPOLYMER (CELCON), HOMOPOLYMER(DELRIN)
AK	ACRYLIC,N.O.C.
AL	ACRYLIC,BUTYL METHACRYLATE
AM	ACRYLIC,METHYL METHACRYLATE,CAST
AN	ACRYLIC,METHYL METHACRYLATE,MOLDING TYPE
AO	ALKYD,N.O.C.
AP	ALLYL,N.O.C.
AQ	ALLYL,DIALLYL PHTHALATE (DAP)
AR	AMINO,N.O.C.
AS	AMINIO,MELAMINE-FORMALDEHYDE (MF)
AT	AMINO,UREA-FORMALDEHYDE
AU	CELLULOSIC,N.O.C.
AV	CELLULOSE ACETATE
AW	CELLULOSE ACETATE-BUTYRATE
AX	ETHYL CELLULOSE
AY	CELLULOSE NITRATE
AZ	CELLULOSE PROPIONATE
BA	CELLULOSE TRIACETATE
BB	CHLORINATED POLYETHER (E.G. PENTRON)
BC	CHLOROFUORO,N.O.C.
BD	CHLOROTRIFLUOROETHYLENE,N.O.C. (CTFE)
BE	POLYCHLOROTRIFLUOROETHYLENE,FILLED
BF	POLYCHLOROTRIFLUOROETHYLENE RESIN (E.G., KEL-F 81,82)
BG	EPOXY,N.O.C.
BH	EPOXY,AMINE CURED
BI	EPOXY,ANHYDRIDE CURED
BJ	EPOXY,CATALYTICALLY CURED (E.G.,BF3-400 CURED)
BK	EPOXY,NOVALAK
BL	EPOXY,POLYAMIDE CURED
BM	EPOXY,PROPRIETARY OR UNKNOWN
BN	EVA (ETHYLENE-VINYL ACETATE),N.O.C.

TABLE II NASA MATERIAL CODES (SECOND 2 PAIRS OF CHARACTERS) (CONTINUED)

CODE	DEFINITION
BO	PERFLUORO ETHYLENE-PROPYLENE COPOLYMER (FEP)
BP	FLUORO,N.O.C.
BQ	FURAN,N.O.C.
BR	IONOMER,N.O.C. (E.G.,SURLYN A)
BS	NYLON,N.O.C.
BT	NYLON,6,6 TYPE
BU	NYLON,SOLUBLE
BV	NYLON,AROMATIC (E.G., NOMEM)
BW	PARYLENE,N.O.C.
BX	PHENOLIC(PF)(PHENOL-FORMALDEHYDE)
BY	PLASTICS,N.O.C.
BZ	POLYBUTYLENE,N.O.C.
CA	POLYCARBONATE,N.O.C.
CB	POLYESTER,N.O.C.
CC	POLYETHYLENE TEREPHTHALATE(PETP)
CD	POLYIMIDE,N.O.C.
CE	POLYOLEFIN,N.O.C.
CF	POLYOLEFIN,POLYETHYLENE
CG	POLYOLEFIN,POLYPROPYLENE
CH	POLYPHENYLENE OXIDE,N.O.C. (E.G.,PPO)
CI	POLYSULFONE,N.O.C.
CJ	POLYVINYL FLUORIDE (E.G.,TEDLAR) (PVF)
CK	SILICONE,N.O.C.
CL	SILICONE,RESINOUS
CM	STYRENE-ACRYLONITRILE
CN	TETRAFLUOROETHYLENE,N.O.C. (TFE)
CO	TFE,PTFE RESIN(E.G.,TEFLON TFE,HALON TFE, THIOKOL TFE)
CP	TFE,PTFE FILLED (E.G.,RULON,FLUOROGREEN)
CQ	URETHANE,N.O.C.(SEE ALSO RUBBER AND COATINGS LISTINGS)
CR	URETHANE,RESINOUS,N.O.C.
CS	URETHANE.SPANDEX
CT	VINYLDIENE FLUORIDE (E.G. KYNAR)
CU	VINYL,N.O.C.
CV	VINYL,POLYVINYL ACETATE
CW	VINYL,POLYVINYL ALCOHOL
CX	ACRYLIC RUBBER,N.O.C.
CY	BUTADIENE RUBBER,N.O.C.
CZ	BUTYL RUBBER,N.O.C.
DA	CHLOROFUORO ELASTOMER,N.O.C.
DB	CHLOROPRENE,N.O.C.(NEOPRENE)
DC	CHLOROSULFONATED POLYETHYLENE,N.O.C. (E.G.,HYPALON)

TABLE II NASA MATERIAL CODES (SECOND 2 PAIRS OF CHARACTERS) (CONTINUED)

CODE	DEFINITION
DD	ETHYLENE PROPYLENE RUBBER (EPDM, EPM, EPR), N.O.C.
DE	FLUROELASTOMER, N.O.C. (E.G., FLUOREL)

TABLE II NASA MATERIAL CODES (SECOND 2 PAIRS OF CHARACTERS) (CONTINUED)

CODE	DEFINITION
IB	POLYCARBORANESILOXANE
IC	POLYQUINOXALINE RESIN,N.O.C.
IE	ETHER,N.O.C.
ID	SILICA GEL
XX	NO CLASSIFICATION
YY	SEE REMARKS ON TEST REPORT

\* MATERIAL CODES FOR METALS \*

In order to facilitate the assignment of NASA MATERIAL CODES for metals a special code table, "MATERIAL CODES FOR METALS", has been prepared and is tabulated below. Those codes identified on the previous pages by an asterisk (\*) have been assigned a new code beginning with the letter 'M' for the second and third pairs of the code, which shall be used in identifying these metals. The 2nd pair of the NASA MATERIAL CODE will identify the base metal and the 3rd pair will identify the primary alloying element.

MA	ALUMINUM
MB	ANTIMONY
MC	COPPER
MD	STEEL,N.O.C.
ME	BORON
MG	MANGANESE
MH	CHROMIUM
MI	IRON
MJ	CARBON
MK	PLATINUM
ML	MOLYBDENUM
MM	MAGNESIUM
MN	NICKEL
MO	COBALT
MP	LEAD
MQ	MERCURY
MR	SILVER
MS	TIN
MT	TITANIUM
MU	GOLD
MV	VANADIUM
MW	TUNGSTEN
MY	BERYLLIUM
MZ	ZINC

APPENDIX III - Test Type and Result Indicator Tables

TT Test type code indicates type of test performed. These codes and their definitions appear in the following table:

<u>Code</u>	<u>Test Type (TT) Code Definition</u>
A	Propagation Rate, Upward, Standard paper igniter
B	Propagation Rate, Downward, Standard paper igniter
C	Propagation Rate, Nonstandard
F	Flammability Test, Developmental/Experimental
G	Included in Code C
H	Odor and/or Outgassing Test, Developmental/Experimental
I	Propagation Rate, Upward, Standard, silicone/clean weld type B igniter
J	Propagation Rate, Downward, Standard, silicone/clean weld type B igniter
K	Propagation Rate, Upward, Nonstandard, silicone/clean weld type B igniter
L	Propagation Rate, Downward, Nonstandard, silicone/clean weld type B igniter
M	Flash and Fire, Nonstandard (under 25 psia)
N	Electrical Overload for Sealed Containers, Nonstandard
P	Vented Container Flammability Test, Nonstandard
Q	Odor Test, Nonstandard
R	Conformal Coating Flammability Test, Standard
S	Carbon Monoxide (CO) and Total Organics (TO) determination, Nonstandard
T	Electrical Wire Insulation and Accessory Flammability Test, Nonstandard
V	Autogeneous ignition, Nonstandard
W	Panel, Assembly, and Special Configuration Flammability Tests (except Test Type "T")
X	Specialized Test

TT Test type code indicates type of test performed. These codes and their definitions appear in the following table (continued):

<u>Code</u>	<u>Test Type (TT) Code Definition</u>
Z	Propagation Rate, Upward, Nonstandard Paper Igniter
0 (zero)	Panel and Assembly Flammability Test, Standard
1	Crew Bay Configuration Flammability Verification Test, Standard
2	Propagation Rate, Downward, Nonstandard, Paper Igniter
3	Flash and Fire, Standard (under 25 psia)
4	Electrical Wire Insulation and Accessory Flammability Test, Standard
5	Electrical Potting and Coatings (excludes conformal coatings) Flammability Test, Standard
6	Odor Test, Standard
7	Carbon Monoxide (CO) and Total Organics (TO) determination, Standard
8	Vented Container Flammability Test, Standard
9	Electrical Overload for Sealed Containers, Standard
10	Pneumatic Impact (Gaseous Oxygen)
11	Mechanical Impact (Gaseous Oxygen)
12	Thermogravimetric Analysis (TGA)
13	Flash and Fire Point (over 25 psia)
14	Reaction Propagation Test (Ignitor)
15	Autoignition Test or Constant Temperature Immersion in Category J Fluids
16	Fluid Impact Test (Lox and other liquids)
17	Reaction Propagation Test (Overload)
18	Configuration Test
19	Beaker Test
20	TRT - Thermal Regeneration Temperature Test

RI Results Indicator code indicates the results of the test. These codes and their definitions are shown in the following tables:

<u>Code</u>	<u>Result Indicator (RI) Code Definition</u>
A	No ignition (defined as no evidence of having been ignited after ignition source has been removed )
B	Self-extinguishing (defined as, in the event of ignition, that the flame will go out within 50% of sample length after the ignition source has been removed)
C	Propagated partially, (Flame propagated less than six inches)
D	Propagated completely, (Flame propagated more than six inches)
E	Ignited explosively
F	Light smoke, visible
G	Smoldering combustion. (Material combustion was evidenced by a glow rather than a flame)
H	No evidence of fire; however, severe deformation of configuration resulted. (Not to be used with sample tests)
I	Inconclusive results. (Related to configuration testing - not to be used with sample tests)
J	Soot and/or char detectable
K	Case burst (vented or sealed container)
L	Case external wall temperature exceeded 450°F
M	Matter transfer. Material sparked, sputtered, spurted flame, dripped globules of burning matter, or otherwise gave evidence of matter transfer
N	No external effect (vented or sealed container)
O	Material Flashed or Flamed
P	Emission of toxic gas or fumes (vented or sealed container)
Q	Emission of sparks or flames (vented or sealed container)
R	Discoloration
S	Smoke, heavy and dark

RI Results Indicator code indicates the results of the test. These codes and their definitions are shown in the following tables (continued):

<u>Code</u>	<u>Result Indicator (RI) Code Definition</u>
T	Evidence of combustion (no rate measured)
U	Completely decomposed
V	Detonation
W	Odor produced
X	Material burned at a high rate, too fast to measure, but not classified as an explosion.
Y	Melted (not accompanied by burning)
Z	See Test Report

TC Test (Application) Category code indicates the category to which the material was tested. These codes and their definitions appear in the following table:

<u>Code</u>	<u>Test (Application) Category (TC) Code Definition</u>
A	Major Exposed Materials
B	Special Applications and Minor Exposed Materials
C	Suit Loop Materials (less than 20 psia oxygen)
D	Materials in High Pressure Oxygen System
E	Materials in Hermetically Sealed Containers
F	Materials in Vented Containers
G	Materials in Nonflight Equipment - Major Exposed
H	Materials in the Uninhabited Portions of the Spacecraft - Major Exposed
I	Material in Nonflight Equipment - Minor Exposed
J	Materials in Uninhabited Portions of the Spacecraft - Minor Exposed
K	Material Tests Listed in TC's, "A", "C", "G", and "H"
L	Material Tests Listed in TC's "B", "I", and "J"
M	Material Tests Listed in TC's "A", "B", "C", "G", "I", "H", and "J"
N	Material Tests Listed in TC's "B", "D", "F", "I", and "J"
P	Material Tests Listed in TC's "A", "B", "C", "G", "I", "H", and "J"
Q	Material Tests Listed in TC's "A", "B"
R	Material Tests Listed in TC's "B", "G", "I", "H", and "J"
S	Uncategorized Material Tests of a Developmental/Experimental Type
